With regard Claim 1, "third circuitry configured to sample the data signal in a predetermined phase relationship to the second phase-shifted version of the reference clock signal, while the second circuitry samples the data signal in a predetermined phase relationship to the first phase-shifted version of the reference clock signal, in order to produce a second partial stream of data extracted from the data signal." as recited in combination with other limitation as claimed in the claim,

With regard Claim 16, "producing a second partial stream of data extracted from the data signal by sampling the data signal in a predetermined phase relationship to the second phase shifted version, while the first partial stream of data is being extracted from the data signal by sampling the data signal in a predetermined phase relationship to the first phase-shifted version." as recited in combination with other limitation as claimed in the claim, and

With regard Claim 25, "data recovery circuitry configured to use the two recovered clock signals and the information signal to produce two retimed data output signals indicative of the data information in the information signal, one of the two retimed data output signals being produced using a first respective recovered clock signal while the other of the two retimed data output signals is being produced using a second respective recovered clock signal." as recited in combination with other limitation as claimed in the claim.
